It is the responsibility of the person installing the electrical equipment to ensure that the installation meets the requirements of the IET wiring regulations and is therefore 'fit for purpose'. Factors such as correct selection of components, cable sizing, protective devices and Earth bonding are all critical and should be checked prior to full testing and power-up. Any other regulations applicable to the equipment being installed such as the Machinery Directive and current health and safety legislation must also be adhered to.

All connections (including factory made) must be checked for the correct tightness prior to commissioning of the electrical installation.
All connections should also be inspected periodically to ensure correct tightness.

20-125A Modular contactors

Description

- Ideal for consumer unit applications
- Available in 2 pole and 4 pole versions
- Normally open and normally closed options available
- DIN rail mounted fitting
- Quiet operation

Important:

When installed MCB module blanks must be placed on either side of each modular contactor to ensure heat dissipation
